

ABSTRACT OF THE DISCLOSURE

A dischargeable storage device instantaneously moveable between a store position and a discharge position. The dischargeable storage device includes a deck having a pair of pivotable trap doors. Each door has a guide post. The
5 dischargeable storage device has a plunger having two guide channels. The plunger is moveable within the aperture. Each guide channel is adapted to cooperate with one of the guide posts such that when the plunger is depressed, the guide posts travel along the guide channels allowing the trap doors to open. An apparatus for
for evenly distributing portions of food having a dischargeable storage device is also
10 disclosed.
